Sustainability: Elco AG puts PV plant into operation

A significant step towards a green future: Elco AG celebrates its latest success in the field of renewable energy!

We are pleased to announce another groundbreaking step forward in our commitment to sustainability. Elco AG successfully commissioned its state-of-the-art photovoltaic (PV) system at the end of October. This impressive installation, which proudly adorns our roofs, reflects not only our technological progress, but also our strong dedication to a more sustainable and greener future.

Not only are we setting new standards in our own energy efficiency, we are also making a significant contribution to reducing our ecological footprint. Elco AG's strong commitment to switching to renewable energy is a living expression of our pledge to innovation, environmental protection and careful use of our planet's resources.

The PV plant is another chapter in a series of measures to reduce our impact on the environment and to constantly seek the most innovative solutions in terms of sustainability. We look forward with pride to a green future and to what is yet to come.

Some Facts:

Commissioning	October 2023
Surface	3438m ²
Modules:	1743 Stück
Peak Performance:	723 kWp
Energy per year :	715 MWh (Corresponds to 200 Single-family houses per year)
CO ₂ Savings:	280 tons per year
